## TECHNICAL SKILLS

**Frontend Development:** Next.js, JavaScript, React.js, TailwindCSS

**Backend Development:** TypeScript, Ruby, Rust, Node.js, Express.js, tRPC, Zod, REST APIs, GraphQL API

**Databases & ORMs:** PostgreSQL, MongoDB, Drizzle ORM, Prisma ORM

**Testing & DevOps:** Playwright, E2E Testing, Docker, GitHub Actions, Homebrew

## EXPERIENCE

### Antiwork — Open Source Contributor

*Remote*

July 2025 – October 2025

- **Earned \$40,000+** in open-source bounties through **Flexile** and merged **55+ PRs** across Antiwork repositories including **Helper**, **Flexile**, and **Gumboard**.
- Designed and shipped **Equity Management** features in **Flexile** — including **Cap Tables**, **Option Pools**, and **Lawyer Management UI** — while migrating **company updates** and related modules from **tRPC** to a **Rails API** for improved consistency and backend performance.
- Refactored **Helper** from a **multi-tenant** to **single-tenant architecture** and simplified **mailbox logic** to improve maintainability and deployment simplicity.
- Removed legacy **encrypted-field logic** by migrating to **plaintext storage** (Helper repo), simplifying setup and data handling.
- Enabled **automated CI runs** for contributor pull requests and expanded **E2E test coverage** across repositories, enhancing reliability and developer experience.

### TSCircuit — Open Source Contributor (Maintainer)

*Remote*

Aug. 2024 – Jun. 2025

- **Earned \$1500+** in bounties and **\$1200+** in **GitHub sponsorships** through sustained contributions, maintenance, and feature development across multiple TSCircuit repositories.
- Maintained and contributed to the core electronics library that converts React-based circuit definitions into real electronic schematics and PCB layouts, with over **180+ merged PRs**.
- Boosted flaky test coverage from **5% to 95%+** using Playwright in the Maintenance project, earning a **\$20/month bounty** for ongoing CI reliability improvements.
- Architected initial fake-backend endpoints and infrastructure for the Fake Reddit project, enabling seamless frontend-backend integration.
- Built the **Issue Roulette Game** frontend using **Next.js + TypeScript** (\$40 bounty), and developed the **Contribution Tracker** dashboard to visualize contributor activity and automate project insights.

### Mediar AI — Open Source Contributor

*Remote*

Mar. 2025 – Jun. 2025

- **Earned \$250+** in bounties via **Algora.io** for contributions to **Terminator** and **Screenpipe** projects, with **6+ PRs merged**.
- Added **Dockerfile** setup, fixed **publish-mcp.yml**, and released **Screenpipe** to the official **Homebrew/core** repository.
- Developed **AI-driven automation examples** using the **Terminator SDK** — including Gmail and VLC player integrations — and implemented an on-screen **highlight\_element** feature for visual debugging.

## EDUCATION

### Birla Institute of Technology, Mesra (Jaipur Campus)

*Bachelor of Technology — Artificial Intelligence*

Jaipur, India

Aug. 2023 – May 2027 (Expected)

- **Current CGPA:** 8.67 / 10
